Re: July 9 Board of Health Agenda

Attention Ida Bediou - Please add the following to your July 9 Board of Health Agenda - thanking you . . .

Please know that, in the matter of water fluoridation, none of the esteemed promoters can tell you exactly how much lead, arsenic, cadmium and mercury are also added to water supplies . . . I can assure you that there is a huge quantity added annually to water supplies with water fluoridation chemicals.

Your very own health departments will tell you they check water regularly to ensure this complies etc etc with health department standards but, in actual fact, there is NO amount of lead, arsenic etc that is beneficial for the human body and all of the above are in fact carcinogens or probable carcinogens.

Sorry that the state of our health departments is so shocking, sorry that the truth is never allowed to surface in the water fluoridation debate . . . at least not from advertisements etc placed by promoters.
