Subject: Water Fluoridation

Mr/Mrs. Clerk can you please forward this to all of our councillors and have this submitted in as part of the record.

Thank you.

Dear Clerk and Councillors,

I am writing you this e-mail because I am concerned about the practice of water fluoridation. I am unable to find any hard science that says ingesting fluoride is good for our teeth. It is like ingesting sun tan lotion for our skin. It doesn't work like that. Furthermore and most importantly, I understand that the fluoride we put in our water is not pure fluoride. It is in fact industrial waste from the steel industry in China of all places. This practice is unacceptable. It is the only example I know of where a people is forced medicated. We need to move forward on this and join 99% of Europe in ridding our water of toxic industrial waste management known as fluorodating water.

We're smarter than this!

Thanks.

Kevin Hamilton
