Dear Ms. Bediou, 

I oppose water fluoridation and request that you include my comments in the July 9th Board of Health Agenda. It has been proven that there are no significant health benefits to fluoridating public drinking water. Studies have shown that in Vancouver, where the water is not fluoridated, there is actually a lower incidence of cavities in the population than in Toronto, where water is fluoridated. Furthermore, fluoride has been proven to be detrimental to health in many ways.

Regards,
Robert
