In 2001, the Government of Ontario issued a legally binding regulation requiring the phase-out of coal-burning at the Lakeview Generating Station in Mississauga by April 30, 2005.

In 2007 the Government of Ontario issued a legally binding regulation requiring the cessation of coal-burning at Ontario’s four remaining coal-fired power plants by December 31, 2014.\(^1\)

Ontario’s coal phase-out is the single largest greenhouse gas emission reduction initiative in North America – equivalent to taking almost seven million cars off the road.\(^2\) Bringing the coal phase out to a successful conclusion as soon as possible will position Ontario as a global leader in addressing climate change and compliment the province’s efforts to reposition itself as a green energy and economy leader.

\section*{2009 in Review}

- Ontario’s coal-fired electricity generation fell by 73\% between 2003 and 2009 – from 36.3 billion kWh in 2003 to 9.8 billion kWh in 2009.\(^3\)
- Coal-fired generation was responsible for only 6.6\% of Ontario’s total electricity production in 2009.\(^4\)
- In 2009 Ontario’s coal-fired electricity output was at its lowest level in 45 years.\(^5\)
- However, according to a study prepared for the Government of Ontario, Ontario’s coal-fired electricity generation in 2009 still caused 246 deaths, 342 hospital admissions, 406 emergency room visits and almost 123,000 minor illnesses (e.g., asthma attacks) in Ontario.\(^6\)
- Coal-fired electricity generation is no longer profitable for Ontario Power Generation (OPG). In 2009, OPG received a $412 million subsidy from Ontario’s electricity consumers to compensate it for the operating losses of its Nanticoke and Lambton coal-fired power plants.\(^7\)
- In 2009 Ontario’s net electricity exports (10.3 billion kWh) exceeded its total coal-fired electricity generation (9.8 billion kWh).\(^8\)

\section*{We Can Phase-Out Coal Now}

As of November 2009, Ontario’s coal-free generation capacity was 23\% greater than our forecast peak day demand in the summer of 2010 and 27\% greater than our forecast peak day demand in 2014.\(^9\)

Given that Ontario’s coal-free generation capacity now exceeds our peak day demand by 23\%, under normal conditions, our need for coal-fired electricity is negligible. Nev-
ertheless, according to the Ontario Power Authority, we need to retain some of our coal capacity on **standby reserve** until December 31, 2014 because the “Pickering nuclear units could reach the end of their operating lives sooner than expected.”

Furthermore, according to the Independent Electricity System Operator, one or more of the Nanticoke units may need to be operated at minimum output from time-to-time to provide grid stability.

The need to maintain some of our coal plants on **standby reserve** until the legally binding date for a complete coal phase-out (December 31, 2014), however, does not mean that we need to continue to use them to produce dirty electricity in the absence of an emergency or a need to support grid stability.

**Conclusions**

By achieving a virtually complete coal phase-out before this summer’s G20 Summit in Toronto, Ontario can protect public health and provide climate change leadership to Canada, the United States, China and the World.

**Recommendations**

1. Premier McGuinty should direct Ontario Power Generation to put its dirty coal plants on **standby reserve** immediately and only operate them if they are absolutely needed to keep the lights on in Ontario.

2. To protect the climate and air quality gains created by Ontario’s coal phase out, Premier McGuinty should direct the Independent Electricity System Operator to import coal-fired electricity from the U.S. only if there is no other option to keep the lights on in Ontario.*

---

* The IESO has a policy of importing coal-fired electricity whenever its “financial” cost (excluding public health and environmental costs) is less than the “financial” cost of the next unit of domestic electricity generation. This undermines the whole purpose of the coal phase-out. We should only import coal-fired electricity if there is no other option to keep the lights on in Ontario.
Endnotes

1. Ontario Regulation 496/07, Ontario Regulation made under the Environmental Protection Act: Cessation of Coal Use – Atikokan, Lambton, Nanticoke and Thunder Bay Generating Stations.

Ontario’s peak demand for electricity in the summer of 2010 (23,608 MW) was 27% greater than the forecast peak demand in 2014.

Ontario’s peak demand for electricity fell by 10% between 2006 and 2009 and the Independent Electricity System Operator projects that it will continue to fall between now and 2014. Let’s show the world that we do care about our climate!

WE CAN PHASE OUT COAL TODAY AND KEEP THE LIGHTS ON IN ONTARIO!

Premier Dalton McGuinty
Legislature Building
Queen’s Park
Toronto, ON
M7A 1A1

Let’s show the world at the G20 Summit in Toronto that we are taking action on climate change!

www.cleanairalliance.org
ACTION ON CLIMATE CHANGE CAN’T WAIT

Finally, phase out of coal-fired electricity is the single largest initiative to combat climate change in North America.

Fortunately, Ontario now has a large surplus of cleaner electricity generation capacity. That means we don’t have to wait until the government’s official deadline of 2014 to phase-out coal – we can do it today!

Ending coal use in Ontario would be the climate equivalent of taking seven million cars off the road. The faster we get rid of coal, the sooner we can lower our climate impact, improve air quality and reduce toxins like mercury and lead in our environment.

Using coal isn’t even economic anymore. Ontario Power Generation lost more than $290 million on its coal plant operations in 2009.

Let’s end coal use now and demonstrate real climate leadership to Canadians and the world!

Please send the postcard below to Premier Dalton McGuinty urging him to fulfill his promise to end the use of dirty coal today! No more delays! Let’s show the world we are ready to do our part to safeguard our climate and our environment.

DEAR PREMIER McGuinty, I applaud your commitment to ending coal use for electricity generation in Ontario by 2014. But at a time when the world desperately needs climate leadership, Ontario can lead the way by idling its coal plants right now. I do not want to wait another four years to end the use of harmful coal. We can give our climate a break and all breathe easier by putting our coal plants on standby reserve right now.
